1.About Sail

We build lasting relationships with customers based on trust and mutual benefit. We uphold highest ethical standard conduct of our business .we create and nurture a culture flexibility, earning and is proactive to change .we chart a challenging. We besides being the second-largest producer of steel in the world India's domestic consumption has reached a level of52 Million Tonnes The second-highest in the World.

V n. We are Your Company played a pivotal role in supporting projects of national and strategic importance. We supplied steel fora wide array of infrastructure initiatives including the Delhi–Mumbai Expressway, Central Vista Redevelopment, Mumbai–Ahmedabad Bullet Train, Versova–Bandra Sea Link, Ganga Expressway, Jal Jeevan Mission, Kalpakkam Nuclear Project and metro and tunnel projects across various cities. These contributions underscore SAIL's foundational role in building the New India.

2.Executive Summary

Investment Summary	**Key Valuation Metrics** Intrinsic
Steel Authority of India Limited (SAIL) is India's largest government-owned steel producer. This report presents a rigorous fundamental valuation using Discounted Cash Flow (DCF) methodology based on Free Cash Flow to Equity (FCFE) benchmarked against market price and industry comparables . Our base-case DCF model derives an intrinsic value of ₹190.55 per share against a current market price of ₹154.94, implying a 25% upside. SAIL is assessed as UNDERVALUED on a fundamental basis.	Value (Base Case): **₹190.55** Current Market Price (NSE): **₹154.94** Upside / Margin of Safety: **18.71%** WACC: **10.80%** Cost of Equity (CAPM): **14.25%** Beta (Regression, Daily): **1.62** Terminal Growth Rate (g): **4.5%** Forecast Horizon: **FY2025–FY2030**

3.Key Corporate Facts

Basis	Detail	Significance
Incorporation	1973 (Maharatna, PSU)	Sovereign backing low default risk
Headquarter	New Delhi, India	Central regulatory access
No. of Equity Shares	413.05 Crore	Large-cap, high liquidity
Total Capital Employed	₹95,839.55 Cr (FY25)	Capital intensive sector
Total Equity	₹58,905.61 Cr (FY25)	Strong net-worth base
Total Debt	₹36,933.94 Cr (FY25)	Manageable leverage
Government Ownership	65%	Strategic PSU status
Stock Exchange	**NSE & BSE**	Dual-listed BSE: 500113

4.Beta Estimation & Risk Profile

Beta measures the systematic risk of SAIL's equity relative to the broader market (Nifty 50). Using daily price returns from January 2025 to December 2025 (approximately 250 trading observations) and two regression methodologies were applied to arrive at a robust Beta estimate.

Methodology	Beta Estimate
Ordinary Least Squares (OLS) Regression (Slope)	**1.6203**
Covariance / Variance Method	**1.6203**
Adopted Beta for CAPM	**1.62**

4.1.Interpretation of Beta

A Beta of 1.62 indicates SAIL is a high-beta. For every 1% movement in the Nifty 50 index SAIL's stock is expected to move approximately 1.62% in the same direction. This reflects the steel sector's inherent sensitivity to macro-economic cycles with commodity price fluctuations and industrial demand. Investors seeking exposure to India's infrastructure build-out accept this elevated systematic risk in exchange for higher return potential.

Market Data (Nifty 50 — Annual)	SAIL Stock Data (Annual)
Period: May 2016 – May 2025	Period: May 2016 – May 2025
Average Annual Return (Nifty): 15.97%	CAGR (SAIL): 11.23%
Nifty CAGR: 12.23%	Average Annual Return (SAIL): 45.78%

5.Cost of Capital — WACC Computation

The Weighted Average Cost of Capital (WACC) represents the blended required rate of return across all sources of capital majorly(equity , debt) and weighted by their market-value proportions. It is used as the enterprise discount rate in FCFF-based valuation. For SAIL WACC is computed using the CAPM-derived Cost of Equity an after-tax Cost of Debt and the FY25 book-value capital structure as a proxy for market weights.

5.1WACC —Summary Table

Company	Total Equity (₹ Cr)	Total Debt (₹ Cr)	Tax Rate	Equity W.	Debt W.
Steel Authority of India Ltd	58,905.61	36,933.94	30.00%	**61.46%**	**38.54%**
Total Capital (Equity + Debt)	**95,839.55**	—	—	**100.00%**	—

Source: SAIL Consolidated Balance Sheet, FY 2024-25 (WACC Sheet — Working Note). Equity = Total Equity per BS (₹58,905.61 Cr); Debt = Non-Current Borrowings (₹10,100.95 Cr) + Current Borrowings (₹19,710.17 Cr) + Lease Liabilities (₹7,122.82 Cr) = ₹36,933.94 Cr

WACC Component	Cost (%)	Weight (%)	W. Cost (%)	Reference(excel sheet)
Cost of Equity (Ke) — CAPM	14.25%	61.46%	8.76%	WN-1(a) / CAPM
Pre-Tax Cost of Debt (Kd)	7.56%	38.54%	—	WN-2
After-Tax Cost of Debt [Kd × (1−T)]	5.29%	38.54%	2.04%	WN-2
WACC [= Ke × We + Kd(1−T) × Wd]	—	100.00%	10.80%	Final Output

WACC Formula: WACC = (Ke × We) + [Kd × (1 − T) × Wd] = (14.25% × 0.6146) + (7.56% × 0.70 × 0.3854)

Working Note 1 — Cost of Equity: Dividend Growth Model (DGM)

The Dividend Growth Model was used as a cross-check to CAPM. SAIL historical dividend record from FY2011– FY2025 was sourced from NSE corporate actions to compute the sustainable dividend growth rate.

DGM Input	Value	Source
Market Price (P_0)	₹154.94	NSE Closing Price — Working Note 1(a)
$D_1 = D_0 \times (1 + g)$	₹1.6467	D_0 = ₹1.60 × (1 + 2.92%) — WACC Sheet
Dividend Growth Rate (g-DGM)	2.92% (CAGR)	Historical dividend CAGR FY11– FY25
Ke (DGM) = $D_1/P_0 + g$	**3.98%**	Not adopted — too low CAPM preferred

Note: DGM Ke of 3.98% is unrealistically low, driven by SAIL's suppressed dividend yield relative to its cyclical risk. CAPM (14.25%) is the adopted measure, consistent with market risk pricing

Working Note 2 — Cost of Debt (Kd)

The pre-tax cost of debt is computed as the ratio of total finance costs (interest expense) to average interest- bearing debt outstanding. The source is the Consolidated Income Statement and Consolidated Balance Sheet.

Particulars	FY 2024-25 (₹ Cr)
Finance Costs (Interest Expense)	2,793.17
Non-Current Borrowings	10,100.95
Current Borrowings	19,710.17
Lease Liabilities (NC + Current)	7,122.82
Total Interest-Bearing Debt	36,933.94
Pre-Tax Kd = Finance Costs / Debt	7.63%
Adopted Pre-Tax Kd (WACC Sheet)	7.56%
Tax Rate	30.00%
After-Tax Kd = Kd × (1 − T)	**5.29%**

Working Note 1(a) — Cost of Equity: CAPM (Adopted)

The Capital Asset Pricing Model (CAPM) is the primary methodology for estimating the Cost of Equity. Annual price data for SAIL and Nifty 50 over 2016–2025 were used to compute the expected market return and beta- based risk premium

CAPM Parameter	Value	Method
Risk-Free Rate (Rf)	6.38%	**10-Yr GOI Bond**
Total Market Return (Rm)	11.23%	**CAGR 2016–2025**
Average Market Return (Rm)	15.97%	**Arithmetic Avg**
Adopted Rm	11.23%	**CAGR(used)**
Beta (β)	1.62	OLS , Cov/Var
Equity Risk Premium (ERP)	4.85%	Rm − Rf
Ke = Rf + β × ERP	**14.25%**	CAPM Formula

Source: WACC Sheet — Working Note 1(a). Risk-free rate from Bloomberg 10-yr GOI yield. Market return from NSE Nifty 50 historical annual closes. Beta from Beta Sheet (daily OLS regression, FY2025).Bloomberg.com/markets/rates- bonds — WACC Sheet WN- 1(a)/Nifty 50 Annual Close — WACC Sheet/WACC Sheet (average of 9 annual returns

1.Free Cash Flow Analysis — FCFF & FCFE

This section provides a complete step-by-step reconstruction of the FCFF and FCFE each line item traced directly to the source financial statement. Free Cash Flow to the Firm (FCFF) measures cash available to all capital providers before debt service(equity ,debt). Free Cash Flow to Equity (FCFE) is the residual after debt obligations.

Working Note 1: NOPAT & Return on Invested Capital

NOPAT (Net Operating Profit After Tax) eliminates the financing effect from EBIT making it a clean measure of operational profitability available to all capital providers. ROIC measures value creation efficiency of SAIL on deployed capital.

Particulars	FY 2024-25 (₹Cr)	FY 2023-24 (₹Cr)	Formula / Note
PBT (before exceptional items)	3,564.17	4,902.65	P&L
Add: Finance Costs (Interest)	2,793.17	2,473.86	Add back
Less: Other Income	(875.03)	(1,066.96)	Exclude non-op.
Add: Share of JV Profit (op.)	486.25	487.75	Equity income
NOPBT (Net Op. Profit Before Tax)	5,870.56	6,937.90	Derived
Tax Rate	30.00%	30.00%	Effective rate
NOPAT = NOPBT × (1 − Tax)	4,109.39	4,856.53	5,870.56 × 0.70
Invested Capital (Capex Base + WC)	94,872.67	92,750.92	79,106.18+23,581.95
ROIC = NOPAT / Invested Capital	**4.33%**	**5.24%**	**= 4,109 / 94,873**

Source: FCFF Sheet — Working Note No. 1. NOPBT derived by adjusting PBT for finance costs and non-operating income, consistent with Damodaran's FCFF methodology. ROIC = NOPAT ÷ Invested Capital.

FCFF — Working Note 2: Reinvestment/ change in Capex & FCFF Growth Rate

Reinvestment represents net new investment in fixed capital and working capital is done by company. Negative working capital (as in FY25) it signals that depreciation and working capital release exceeded new capital that deployment — temporarily boosting free cash flow

Particulars	FY 2024-25 (₹Cr)
Capex FY25 (PPE+CWIP+ROU)	79,106.18
Capex FY24 (prior year base)	77,076.83
Change in Capex = Capex FY25 − Capex FY24	2,029.35
Depreciation & Amortisation (D&A)	5,650.68
Working Capital FY25 = OCA − OCL	23,581.95
Working Capital FY24 = OCA − OCL	24,426.67
Change in Working Capital = WC FY25 − WC FY24	(844.72)
Reinvestment = Change in Capex − D&A + ΔWC	(4,466.05)
Reinvestment Rate = Reinvestment / NOPAT	(108.68%)
FCFF Growth Rate = ROIC × Reinvestment Rate	**(4.71%)**

2.FCFE Sheet — Full Computation

Particulars	FY 2024-25 (₹Cr)	FY 2023-24 (₹ Cr)
Profit After Tax (PAT)	2,371.80	3,066.67
Add: Depreciation & Amortisation	5,650.68	5,278.37
Less: Change in Working Capital	(844.72)	—
Less :Change in Capex	2,029.35	—
Add: Net Borrowings (Change in Debt)	(789.85)	4,939.19
FCFE = PAT + D&A − Change in Working Capital – Change in Capex +Net Borrowings	**6,048.00**	—

Source: FCFF Sheet — FCFE Section. PAT from Consolidated P&L Row 29. D&A from P&L Row 14. ΔWC and ΔCapex from Balance Sheet (Working Note 2). Net Borrowings from Consolidated Cash Flow Statement, Section C (Financing Activities) — Proceeds minus Repayments of LT + ST Borrowings

Cash Flow — Financing Activities (Net Borrowings Detail)	FY2024-25 (₹Cr)	FY 2023-24 (₹Cr)
Proceeds from Long-Term Borrowings	1,250.00	5,000.00
Repayment of Long-Term Borrowings	(1,083.72)	(2,494.93)
Proceeds/(Repayment) of ST Borrowings (Net)	(956.13)	2,434.12
Net Change in Borrowings	(789.85)	4,939.19

Source: SAIL Consolidated Cash Flow Statement, FY 2024-25 — Section C: Cash Flows from Financing Activities (Consolidated Cash Flow Sheet). Net Borrowings of (₹789.85 Cr) indicates net debt repayment in FY25 vs. net borrowing of ₹4,939.19 Cr in FY24

3.DCF Valuation — FCFE Model

The valuation employs a two-stage Dividend Discount / FCFE model: 1 an explicit 5-year forecast period (FY2025–FY2030) with a -6.25% annual FCFE growth rate and (ii) a terminal value computed using the Gordon Growth Model with a perpetual growth rate of 4.5%. All future cash flows are discounted at the Cost of Equity (14.25%).

3.1Assumptions

Assumption	Value	Justification
Base FCFE (FY25)	₹6,048.00 Cr	Derived from consolidated financials
FCFE Growth Rate (Forecast)	-6.24% p.a.	FCFE Growth rate(ROE*Reinvestment Rate)
Discount Rate (Ke)	14.25%	CAPM — Rf 6.38% + β1.62 × ERP 4.85%
Terminal Growth Rate (g)	4.5%	Conservative; aligned with nominal GDP growth
No. of Equity Shares	413.05 Crore	Source: Consolidated Notes
Forecast Horizon	FY2025 – FY2030	5-year explicit period

4.Terminal Value & Intrinsic Share Price

Valuation Component	Value (₹ Cr)
FCFE in Terminal Year (FY31: FCFE30 × 1.12)	10,443.16
Terminal Value [FCFE31 / (Ke − g)]	1,07,163.05
PV of Terminal Value (discounted at Ke, 6 years)	55,062.62
Sum of PV of FCFEs (FY25–FY30)	23,644.82
Total Equity Value	78,707.44
Number of Shares (Crore)	413.05

1. Sensitivity Analysis

The intrinsic value of ₹190.55 is the base-case estimate. Below is a sensitivity matrix across different combinations of Discount Rate (Ke) and Terminal Growth Rate (g), highlighting how the share price changes under alternate scenarios.

Share Price Sensitivity: Ke vs Terminal Growth Rate

Ke \ g	g = 3.5%	g = 4.0%	g = 4.5%	g = 5.0%	g = 5.5%
Ke = 12.25%	₹243	₹261	₹283	₹311	**₹347**
Ke = 13.25%	₹210	₹223	₹240	₹260	**₹286**
Ke = 14.25% (considered)	₹183	₹193	**₹206**	₹221	**₹240**
Ke = 15.25%	₹160	₹168	₹178	₹189	**₹204**
Ke = 16.25%	**₹141**	**₹148**	**₹155**	**₹164**	**₹175**

2.Scenario Analysis

Scenario	g (Terminal)	Ke	Intrinsic Value	Verdict
Conservative	4.0%	14.25%	₹183	SLIGHTLY UNDERVALUED
Base Case (1)	4.5%	14.25%	₹190.55	UNDERVALUED — BUY
Optimistic	5.0%	14.25%	₹221	MEANINGFULLY UNDERVALUED
Aggressive	6.5%	14.25%	₹270	SIGNIFICANTLY UNDERVALUED

3.Valuation Verdict — Over / Under Valuation

- **SAIL IS UNDERVALUED**

Intrinsic Value: ₹190.55 | Market Price: ₹154.94 |

1.Key Drivers of Undervaluation

- India's infrastructure supercycle: Government capex under PM Gati Shakti, Railway expansion, and affordable housing drives sustained steel demand and directly benefiting SAIL as the primary domestic supplier.
- Margin of Safety (25%): The current market price of ₹154.94 represents a substantial discount to the intrinsic value of ₹190.55 providing a cushion against forecast errors.
- Negative Reinvestment Rate: SAIL's negative reinvestment rate (-155%)/ in FY25 reflects high depreciation relative to incremental capital spending freeing up cash flow for equity holders.
- Debt Reduction: Net borrowings declined by ₹789.85 Cr in FY25 improving the balance sheet by reducing financial risk and increasing financial flexibility.
- PSU Strategic Value: Government ownership (65.00%) and strategic sector status (steel come under critical infrastructure) provides downside protection and access to government contracts.
- Terminal Growth Conservatism: A 4.5% terminal growth rate is conservative relative to India's nominal GDP growth expectation of 10–11%, suggesting the model does not fully price in India's long-term growth.

2. Key Risks & Caveats

While the base-case valuation supports an undervalued assessment, investors should monitor the following risk factors:

Risk Factor	Description
Commodity Price Volatility	Iron ore and coking coal prices directly impact SAIL's EBITDA margins. A sustained rise in input costs could compress FCFE materially.
Cyclicality	Steel demand is highly cyclical. An economic slowdown or reduction in government capex could depress volumes and pricing.
China Overcapacity	Dumping of cheap Chinese steel into Asian markets could undercut SAIL's domestic pricing power.
High Beta Risk	With a Beta of 1.62 SAIL underperforms significantly in market downturns posing volatility risk for short-term investors.
ROIC < WACC	ROIC of 4.33% is below WACC of 10.80%, indicating the firm is not currently creating economic value a structural concern.
Execution Risk	Planned capacity expansions require timely execution delays may overruns cost could affect future FCFFs.

3.Industry Context & Comparative Analysis

India is the world's second-largest steel producer and is forecast to be the fastest-growing major steel market globally. The following charts and comparisons place SAIL's valuation and financial profile in industry context.

India Steel Sector — Demand Outlook (Million Tonnes)

The chart below represents India's finished steel consumption growth trajectory a key driver of SAIL's revenue forecast assumptions.

Year	FY19	FY20	FY21	FY22	FY23	FY24	FY25E	FY30F
Consumption (MT)	98 MT	100 MT	89 MT	106 MT	120 MT	136 MT	145 MT	**~190 MT**
YoY Growth	—	**+2%**	**-11%**	**+19%**	**+13%**	**+13%**	**+7%**	**5–7% CAGR**

Source: Ministry of Steel, India; JPC Steel Data; Estimates for FY30 based on NITI Aayog Steel Vision 2030. India targets 300 MT steel capacity by 2030, up from ~170 MT today.

4.Peer Comparison — Key Financial Metrics (FY2024-25)

The table below benchmarks SAIL against its primary peers in the Indian integrated steel sector, providing context for relative valuation.

Metric / Company	SAIL	Tata Steel	JSW Steel	JSPL	NMDC Steel
Revenue (₹ Cr)	**102,479.06**	218,542.51	1,68,824.00	41,701	23,668
EBITDA Margin (%)	**9–10%**	12–14%	15–17%	20–22%	8–20%
Debt/Equity (x)	**0.63x**	0.85x	0.72x	0.35x	0.40x
Beta	**1.62**	1.46	1.26	1.30	1.50
ROIC (%)	**4.33%**	6–8%	10–12%	14–16%	5–7%
Market Cap (₹ Cr)	**60,594.81**	**1,59,238.52**	**1,05,873.25**	**42,102.74**	**3,976.34**

Note: Peer data sourced from publicly available annual reports and consensus estimates. SAIL highlighted in blue for reference. SAIL's ROIC remains below peers, though its PSU status provides strategic advantages not captured in financial multiples alone.

Steel Authority of India Limited (SAIL) presents a mixed positioning when benchmarked against key peers such as Tata Steel, JSW Steel, Jindal Steel and NMDC Steel in FY2024–25. While SAIL maintains a meaningful scale with revenues exceeding ₹1.0 lakh crore it remains materially smaller than industry leaders like Tata Steel and JSW Steel though ahead of mid-tier players such as JSL and NMDC Steel. From a profitability standpoint, SAIL underperforms its peers with EBITDA margins in the range of 9–10%, reflecting relatively weaker cost efficiency and limited pricing power compared to private sector counterparts particularly JSL and JSW Steel which exhibit superior margin profiles. On the balance sheet front SAIL's debt-to-equity ratio of 0.63x indicates a moderate leverage position more conservative than Tata Steel but slightly elevated relative to JSL and NMDC Steel suggesting a reasonably stable capital structure. However, the company's beta of 1.62 highlights higher earnings and stock price sensitivity to cyclical movements in the steel sector. More critically SAIL's return on invested capital (ROIC) at 4.33% lags significantly behind peers underscoring suboptimal capital allocation and lower operational efficiency. Despite its relatively modest market capitalization the overall financial profile suggests that SAIL trades as a value-oriented cyclical play with structural inefficiencies and weaker return metrics limiting its competitiveness against more agile and operationally efficient private sector peers.

5.Conclusion & Investment Recommendation

This report has conducted a comprehensive bottom-up equity valuation of Steel Authority of India Limited (SAIL) using the Free Cash Flow to Equity (FCFE) discounted cash flow framework, complemented by rigorous WACC computation and beta estimation

INVESTMENT RECOMMENDATION

BUY | UNDERVALUED

Target Price (Base Case): ₹190.55 | Current Price: ₹154.94 %

Time Horizon: 12–18 months | Risk Profile: Moderate-High (Beta 1.62 Cyclical)

> SAIL's current market price of ₹154.94 offers investors a 18.71% discount to our base-case intrinsic value of ₹190.55. The margin of safety is meaningful. While ROIC currently trails WACC a structural challenge reflecting capital intensity and PSU-era inefficiencies the trajectory of India's infrastructure spending would impact SAIL's captive raw material advantages and ongoing modernization capex provide a credible path to value creation over the medium term.

The conservative terminal growth assumption of 4.5% is well-supported by India's nominal GDP growth outlook. Any improvement in EBITDA margins toward peer levels or a successful debt reduction would provide further upside to the target price.
Investors with a 12–18 month horizon and moderate-to-high risk tolerance (given cyclical and high-beta characteristics) are recommended to consider initiating or adding positions at current levels.
